QuakeWatch – 15 AQL Query Summary

1. Q01 analytics_avg_magnitude_by_region

Purpose: complex AQL routine using aggregation, geo search, graph traversal, or revision analysis.

2. Q02 analytics_dashboard_summary

Purpose: complex AQL routine using aggregation, geo search, graph traversal, or revision analysis.

3. Q03 analytics_network_stats

Purpose: complex AQL routine using aggregation, geo search, graph traversal, or revision analysis.

4. Q04 analytics_magnitude_changes

Purpose: complex AQL routine using aggregation, geo search, graph traversal, or revision analysis.

5. Q05 analytics_ingestion_latency

Purpose: complex AQL routine using aggregation, geo search, graph traversal, or revision analysis.

6. Q06 analytics_significant_by_week

Purpose: complex AQL routine using aggregation, geo search, graph traversal, or revision analysis.

7. Q07 alerts_user_rules

Purpose: complex AQL routine using aggregation, geo search, graph traversal, or revision analysis.

8. Q08 alerts_matched_events_graph

Purpose: complex AQL routine using aggregation, geo search, graph traversal, or revision analysis.

9. Q09 event_graph_relationships

Purpose: complex AQL routine using aggregation, geo search, graph traversal, or revision analysis.

10. Q10 events_in_viewport

Purpose: complex AQL routine using aggregation, geo search, graph traversal, or revision analysis.

11. Q11 events_within_radius

Purpose: complex AQL routine using aggregation, geo search, graph traversal, or revision analysis.

12. Q12 events_location_text

Purpose: complex AQL routine using aggregation, geo search, graph traversal, or revision analysis.

13. Q13 ops_run_stats

Purpose: complex AQL routine using aggregation, geo search, graph traversal, or revision analysis.

14. Q14 analytics_depth_histogram

Purpose: complex AQL routine using aggregation, geo search, graph traversal, or revision analysis.

15. Q15 event_nearby_space_time

Purpose: complex AQL routine using aggregation, geo search, graph traversal, or revision analysis.

Evidence source: docs/AQL_QUERIES.md and verification_evidence/queries/baseline_2026-10-07_aql-catalog-run.txt

Status: the catalogue and query logs confirm these query families exist; active DB execution is blocked in the current environment until the ArangoDB service is started in an isolated environment.
